

## **Assignment 4 (Nov. 15-19):**

Study the content of Chapter 4 (Polynomials) of the textbook and work out all its five problems.

Since most of material of this chapter is covered in high-school algebra and in much more detail in Math 205, we will not treat them in class. But a working knowledge of the basic results given in this short chapter will be necessary for grasping some of the material we will cover in the rest of this course.
