

# Reminiscences of Spectrum of Support Sizes of Triple Systems, $SS(v, \lambda)$

G. B. Khosrovshahi  
University of Tehran and IPM  
rezagbk@ipm.ir

In early 80s, after the concept of the trade was introduced by Hedayat, algorithms to construct designs with repeated blocks appeared in the literature. Right after Hedayat et al studied the support sizes of small triple systems, Colbourn and Lindner and independently Ajodani, finally after some years of hard work, settled the entire problem in early 90s. I will give a brief history of these developments.

MSC2000: 05B07, 05B40.

Keywords: Support size, triple systems, trades.
